ELYSATOR

We Hjellnes Cowi is a major consultant company in Scandinavia, with projects in all kind of categories and sizes.

We have described the Elysator in both heating steam and cooling applications as well as in new buildings and in rehabilitating of existing buildings.

Our reason to describe & use the Elysator is that we have practical experience over many years that the water , becomes clear & clean, less sludge and sediments, all this as a result of less corrosion in the systems.

We see us self as an environmentally concerned company and therefore the Elysator working without any chemicals is a benefit too.

Yours faithfully,
for Hjellnes COWI AS

Arild Kristiseter
